MAGNIFICA

S O B R E

nosotros

Magnifica Collection nace en 2018 en el sector cerámico, ofreciendo porcelánicos de gran calidad y marca propia.

Somos una empresa pequeña que surge de la idea de dos amigos forjados en el mundo del azulejo, que recogen todas sus experiencias para traernos una versión mejorada de lo que ya conocían, nos impulsan nuestras ansias de crecer y mejorar cada día. Desde los inicios no hemos parado de innovar y adaptarnos a las nuevas tecnologías. Así lo demuestran nuestros proyectos.

A la hora de crear nuevas colecciones nos fijamos en las tendencias, buscando destacar con las placas de gran tamaño. Nuestro producto intenta salirse de lo convencional y provocar una gran expectación en los clientes, intentamos traer acabados que marquen la diferencia sin perder de vista la elegancia y majestuosidad que los caracteriza.

Magnifica Collection was born in 2018 in the ceramic sector, offering high-quality porcelain tiles and its own Brand.

We are a small company that arises from the idea of two friends forged in the tile world, who collect all their experiences to bring us an improved versión of what they already knew, we are driven by our desire to grow and improve every day. Since the beginning we have not stopped innovating and adapting to new technologies. Our projects prove it.

When creating new collections we look at trends, seeking to stand out with large plates. Our product tries to get out of the conventional and provoke a great expectation in the clients, we try to bring finishes that make the difference without losing sight of the elegance and majesty that characterizes them.

NUESTRA empresa

En estos años de vida, **Magnífica Collection** ha realizado muchos cambios y entre ellos los más destacados serían, el traslado del almacén a un nuevo centro logístico más práctico y con mayor capacidad de almacenaje, la renovación del showroom con conceptos jamás vistos en el sector y la implantación de mecanismos de trabajo que nos facilitan las tareas cotidianas.

In these years of life, **Magnífica Collection** has made many changes and the most outstanding would be the relocation of the warehouse towards a new one: a more practical logistics center with greater storage capacity. Also, the renovation of the showroom with concepts never seen in the sector and the implementation of work mechanisms that facilitate our daily tasks.

CERÁMICA sostenible

La sostenibilidad en cerámica es una tendencia en auge: materias primas cuidadosamente seleccionadas y procesos de fabricación tan respetuosos con el medio, hacen del material cerámico una gran apuesta para el futuro. En los espacios abiertos la cerámica te ofrecerá durabilidad y resistencia. En el caso de los espacios cerrados, tendrás la posibilidad de combinar cerámica e interiorismo, ofreciendo un toque único a tu vivienda.

Si hablamos de sostenibilidad inevitablemente hablamos de reciclaje. La cerámica es, como decíamos al principio, un compuesto de materias

primas naturales, como la arcilla y el agua. El impacto ambiental de su producción, por tanto, se reduce y se integra además fácilmente en nuevos ciclos de fabricación.

A nivel de industria y producción, la tendencia es reducir emisiones, reducir el consumo de agua y de recursos y lograr mayor eficiencia energética. De este modo, se ha invertido en la innovación en cocción de baldosas, se han introducido esiduos en sustitución de materia prima virgen y se está haciendo uso de fuentes renovables.

En Magnífica Collection estamos comprometidos con el medio ambiente y el impacto de nuestras prácticas productivas y empresariales en el entorno que nos rodea. Por eso trabajamos de forma continua en nuestro plan de sostenibilidad, vigilando de forma estricta los niveles de contaminación atmosférica y acústica.

Somos conscientes del valor de los recursos con los que trabajamos. Por esta razón, desarrollamos tecnologías y productos sostenibles que permiten ahorrar agua y energía en nuestras rutinas diarias.

The sustainability in ceramics is a booming trend: carefully selected raw materials and manufacturing processes very respectful to the environment, make the ceramic material a big bet for the future. In the opened spaces the pottery will offer you durability and resistance. In the case of closed spaces, you will have the possibility of combining ceramics and interior design, offering a unique touch to your home.

If we talk about sustainability we inevitably talk about recycling. Ceramic is, as we said at the beginning, compound of natural raw materials, such as clay and water, environmental impact of its production is therefore reduced, and it is also easily integrated into new manufacturing cycles. At the industry and production level, the trend is to reduce emissions, reduce the consumption of water and resources, and achieve greater energy efficiency. Thus, there has been an investment in innovation in tile firing and it has been employed waste to replace virgin raw material and renewable sources are being used.

At Magnífica Collection we are committed to the environment and the impact of our production practices and businesses in the environment that surrounds us. That is why we continuously work in our sustainability plan, keeping an eye on strict levels of atmospheric and acoustic contamination. We know the value of the resources which we work with. For this reason, we develop sustainable technologies and products that save water and energy in our daily routines.

Collection

El mármol es una roca metamórfica compacta formada a partir de rocas calizas que, sometidas a elevadas temperaturas y presiones, alcanzan un alto grado de cristalización. Tras un proceso de pulido por abrasión, el mármol alcanza alto nivel de brillo natural, es decir, sin ceras ni componentes químicos.

Debido a su aspecto brillante tras el pulido, su raíz provendría de la palabra sánscrita mar, que significaba el movimiento de las olas del agua, y que se habría usado como metáfora de las incidencias lumínicas en la superficie mar-mar, que señalaba una agitación más fuerte de las olas.

El mármol fue muy apreciado en la antigüedad y llegó a ser el material favorito de los escultores y arquitecto griegos y romanos convirtiéndose en símbolo de poder. También es un símbolo cultural de la tradición y el gusto refinado. El mármol se usaba originalmente en la Grecia Arcaica para la realización de esculturas decorativas, debido a su rigidez y resistencia.

Marble is a compact metamorphic rock formed from limestone rocks that, subjected to high temperatures and pressures, reach a high degree of crystallization. The basic component of marble is calcium carbonate. After a process of polishing by abrasion, the marble reaches a high level of natural shine, that is, without waxes or chemical components.

Due to its shiny appearance after polishing, its roots would come from the Sanskrit Word sea, which meant the movement of water waves and which would have been used as a metaphor for the incidence of light on the surface of the marble, exaggerating the “movement” of light with the Word sea-sea, which indicated a stronger agitation of the waves.

Marble was highly valued in antiquity and became the favorite material of Greek and Roman sculptors and architects, becoming a symbol of power. It is also a cultural symbol of tradition and refined taste. Marble was originally used in Archaic Greece for decorative sculptures, due to its rigidity and resistance.

Collection

La piedra es el material más antiguo utilizado por el ser humano. Las piedras o materiales pétreos provienen de las rocas. Se trata de sólidos homogéneos de carácter inorgánico compuestos por uno o varios minerales. De hecho, nuestra relación con la piedra ha motivado que la primera etapa de nuestra evolución la conozcamos con el nombre de Paleolítico.

Nuestros antepasados comenzaron a tallar la piedra para fabricar herramientas y útiles de muy diversos tipos, desarrollando una amplia capacidad de técnicas líticas que fueron evolucionando conforme avanzaba la capacidad del ser humano. Pero sobre todos ellos, este material ha destacado como componente fundamental por su uso en la construcción. Hemos recurrido a la piedra y sus derivados para levantar refugios, viviendas y alojamientos; muros, cimientos, columnas y pilares.

La piedra es el material que mejor se conserva y más conocido de los que sirvieron para producir las primeras herramientas.

Stone is the oldest material used by humans. Stones or stony materials come from rocks. They are homogeneous solids of an inorganic nature composed of one or several minerals. In fact, our relationship with the stone has motivated us to know the first stage of our evolution by the name of Paleolithic.

Our ancestors began to carve stone to make tools and tools of many different types, developing a wide range of lithic techniques that evolved as the capacity of the human being advanced. But above all of them, this material has stood out as a fundamental component for its use in construction. We have resorted to stone and its derivatives to build shelters, houses and lodgings; walls, foundations, columns and pillars.

Stone is the best-preserved and best-known material used to produce the first tools.

The image shows a microscopic view of a leaf surface with several stomata. To the right is a schematic diagram of a stomatal complex. It shows a guard cell flanked by two subsidiary cells. The guard cell has a thickened inner wall. Dimensions are indicated: 272.8 for the width of the guard cell and 289.0 for the width of the subsidiary cell. The diagram also shows the stomatal pore and the surrounding epidermal cells.

cement.

Collection

ce ment.

Collection

El cemento es un conglomerante formado a partir de una mezcla de caliza y arcilla calcinadas y posteriormente molidas, que tiene la propiedad de endurecerse después de ponerse en contacto con el agua. Desde la antigüedad se emplearon pastas y morteros elaborados con arcilla o greda, yeso y cal para unir mampuestos en las edificaciones. El cemento se empezó a utilizar en la Antigua Grecia utilizando tobas volcánicas extraídas de la isla de Santorini, los primeros cementos naturales.

En el siglo I a.C, se empezó a utilizar en la Antigua Roma, un cemento natural que ha resistido la inmersión en agua marina por milenios, mientras que los cementos Portland no duran más de 60 años en esas condiciones; formaban parte de su composición cenizas volcánicas obtenidas en Pozzuoli, cerca del Vesuvio. La bóveda del Panteón es un ejemplo de ello.

Cement is a binder formed from a mixture of calcined and subsequently ground limestone and clay, which has the property of hardening after coming into contact with water. Since ancient times, pastes and mortars made with clay, plaster and lime have been used to join masonry in buildings. Cement began to be used in Ancient Greece using volcanic tuffs extracted from the island of Santorini, the first natural cements.

In the first century B.C, in Ancient Rome, a natural cement began to be used, which has resisted immersion in seawater for millenia, while Portland cements do not last more than 60 years in these conditions; Volcanic ash obtained in Pozzuoli, near Vesuvius, was part of its composition. The vault of the Pantheon is an example of this.

An aerial photograph of a dense forest, showing a variety of tree species and colors ranging from dark green to light brown. The word "Wood" is overlaid in the center in large, semi-transparent, white letters. The letters are slightly shadowed, giving them a three-dimensional appearance as if they are floating above the forest canopy.

Wood

Collection

wood.

Collection

La madera es el material que constituye la mayoría del tronco del árbol. Se compone de fibras de celulosa unidas con lignina. Una vez cortada y seca, la madera se utiliza para la construcción de edificios e históricamente, medios de transporte como, por ejemplo, barcos o carruajes, en la elaboración de muebles y otros elementos. Al usarla de combustible, se denomina leña. También se usa para fabricar pulpa o pasta, materia prima para hacer papel.

En composición media se constituye de un 50% de carbono ©, un 42% de oxígeno (O), un 6% de hidrógeno (H) y el 2% restante de nitrógeno y otros elementos. El componente principal de la madera es la celulosa. Existen otros componentes minoritarios como resinas, ceras, grasas y otras sustancias.

La madera se ha usado como material en pavimentos de madera desde tiempos antiguos, debido a su ductilidad y aislamiento, pero no es hasta el siglo XVI cuando se extiende a través de Europa. Algunos ejemplos serían el parquet, pavimento Cosmatesco y la marquetería.

Wood is the material that makes up the majority of the tree trunk. It is made up of cellulose fibers bound with lignin. Once cut and dried, the wood is used for the construction of buildings and, historically, means of transport such as boats or carriages, in the manufacture of furniture and other elements. When used as fuel, it is called firewood. It is also used to make pulp or paste, raw material for making paper.

In average composition, it is made up of 50% carbon (C), 42% oxygen (O), 6% hydrogen (H) and the remaining 2% nitrogen (N) and other elements. The main component of wood is cellulose. There are other minor components such as resins, waxes, fats and other substances.

Wood has been used as material for wooden flooring since ancient times, due to its ductility and insulation, but it was not until the 17th century that it spread Across Europe. Some examples would be parquet, Cosmatesque, paving and marquetry.

adecuado interior y exterior

PROCESO DE CORTE / CUTTING PROCESS

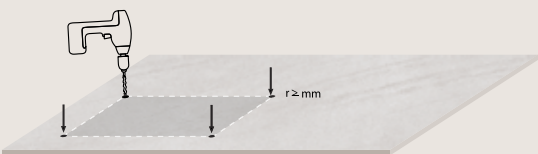

1. Ensure that at least 5 cm space is left between the edge of the slab and the point where the hole has to be made. The radius of the corners must be a minimum of 3 cm.

Asegurarse de que quede al menos 5 cm de espacio entre el borde de la losa y el punto en el que debe hacerse el agujero. El radio de las esquinas deberá ser como mínimo de 3 cm.

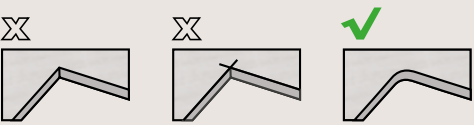

3. Use a drill bit smaller than 3 mm to drill corners of the cut-out.

Utilice una broca de menos de 3 mm para perforar las esquinas del corte.

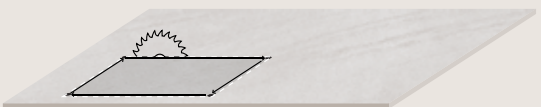

2. Angles cut without necessary radius length create a stress point, whereas the large radius maintains the structural resistance. Make sure to never leave the corners with 90° angle cuts.

Los ángulos cortados sin la longitud necesaria del radio crean un punto de tensión, mientras que el radio grande mantiene la resistencia estructural. Asegúrese de no salir de las esquinas con cortes de 90° ángulos.

4. Use a bridge saw running to cut from one hole to the next. Ensure the bridge saw is running at minimum speed to decrease the stress on the slab.

Utilice una sierra de puente corriendo para cortar de un agujero al siguiente. Asegúrese de que la sierra de puente está funcionando a una velocidad mínima para reducir la tensión en la losa.

INSTALACIÓN / INSTALLATION

Step 1: Prepare the Surface. The laying process of Magnifica is similar to the laying process of traditional tiles and slabs. The laying process of Magnifica requires an adhesive to be applied on the back of the slab and the setting bed. The surface should be flat and clean without any dust particles, scraps or cement residue on it. Any cracks or uneven area of the surface must be filled with leveling compounds. / **Paso 1:** Preparar la superficie. El proceso de colocación de Magnifica es similar al proceso de colocación de las baldosas y losas tradicionales. El proceso de colocación de Magnifica requiere la aplicación de un adhesivo en la parte posterior de la losa y en la cama de fijación. La superficie debe ser plana y limpia sin partículas de polvo, restos o residuos de cemento en ella. Cualquier grieta o área irregular de la superficie debe llenarse con compuestos niveladores.

Step 2: Begin Your Layout. Measure all the walls in the room and find the center point of the room. Start laying a loose row of tiles on the surface, laying tiles from different batches together. Measure the space left uncovered on the edge of the wall and cut tiles accordingly to fill the space. / **Paso 2:** Comience su diseño. Mida todas las paredes de la habitación y encontrar el punto central de la habitación. Empezar a colocar una fila suelta de azulejos en la superficie, la colocación de baldosas de diferentes lotes juntos. Mida el espacio que queda descubierto en el borde de la pared y corte las baldosas en consecuencia para llenar el espacio.

Step 3: Apply the Adhesive. The surface to be covered should be flat, solid and free from dust, oil or grease. Mix the adhesive as mentioned on the technical data sheet of the chosen adhesive. Use a round toothed trowel to spread the adhesive on the surface to be covered. Spread the adhesive across an area, which is 5-10 cm larger than the size of the slab. Hold the slab in a vertical position with a handling frame and apply the adhesive on the back of the slab with a square toothed trowel. / **Paso 3:** Aplicar el adhesivo. La superficie a cubrir debe ser plana, sólida y libre de polvo, aceite o grasa. Mezclar el adhesivo como se indica en la ficha técnica del adhesivo elegido. Utilice una paleta dentada redonda para esparcir el adhesivo sobre la superficie a cubrir. Extender el adhesivo a través de un área, que es 5-10 cm más grande que el tamaño de la losa. Sujete la losa en posición vertical con un marco de manipulación y aplique el adhesivo en la parte posterior de la losa con una paleta dentada cuadrada.

Step 4: Cut Tile as Needed. Always start by measuring the tile and carefully marking cuts to be made on the surface. We recommend using a tile cutter to make straight or diagonal pinpoint cuts. For longer, full-length curved cuts, a rod saw should be used. After making the necessary cuts, use a carborundum stone to smooth out the sharp edges. / **Paso 4:** Corte la baldosa según sea necesario. Comience siempre midiendo la baldosa y marcando cuidadosamente los cortes que se harán en la superficie. Recomendamos usar un cortador de azulejos para hacer cortes rectos o diagonales. Para cortes curvados más largos y largos, se debe usar una sierra de varilla. Después de hacer los cortes necesarios, utilice una piedra de carborundum para suavizar los bordes afilados.

Step 5: Set Your Tile. Use suction cups to horizontally lay the slab on the surface and avoid sliding the slab in its place. We recommend laying the perimeter slabs last and leave a 1/4th inch gap between the slab and wall. And keep placing spacers between each tile as you move forward. Without exceeding the breaking point, carefully insert a wedge into the support. Use of adjustable pliers is advised for easier placement of the wedges. / **Paso 5:** Establezca su azulejo. Utilice ventosas para colocar horizontalmente la losa en la superficie y evitar el deslizamiento de la losa en su lugar. Recomendamos colocar las losas perimetrales por último y dejar un espacio de 1/4 de pulgada entre la losa y la pared. Y siga colocando espaciadores entre cada baldosa a medida que avanza. Sin exceder el punto de ruptura, inserte cuidadosamente una cuña en el soporte. Se aconseja el uso de alicates ajustables para facilitar la colocación de las cuñas.

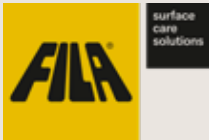

Step 6: Grouting Joints. After the adhesive has dried, tap your foot on the protruding part of the wedge in line with the joint to remove the support. Carefully choose a joint sealant, which has a matching color shade to the slab. Pay attention to the technical sheets and check the cleaning time as some of the colored sealants contain strong pigments and additives. / **Paso 6:** Juntas de rejuntado. Después de que el adhesivo se ha secado, golpee el pie en la parte saliente de la cuña en línea con la articulación para quitar el soporte. Elija cuidadosamente un sellador de juntas, que tiene un tono de color a juego con la losa. Preste atención a las hojas técnicas y compruebe el tiempo de limpieza ya que algunos de los selladores de colores contienen pigmentos y aditivos fuertes.

Use a grout float or squeegee to force the grout mixture down the joints and remove the excess grout from the surface. Use a damp sponge to clean the grout residue from the surface and smooth out the joints.
